

SQIT1013 PROGRAMMING IN BUSINESS APPLICATIONS

GROUP A

2020/2021 (A202) GROUP PROJECT

TO: DR. SHANIZAN HERMAN BIN MOHD RADZI

NO.	NAME	NO. MATRIK
1	TAN HUI LING	277378
2	LEE JUAN	280027
3	NAJIHAH AMALIA BINTI AHMAD NAMIRY	280323
4	NUR SYAHIRAH NATASYA BINTI SUHAIZE	280882

FEASIBILITY STUDY

Feasibility study is an analysis to determine whether the proposed project is feasible and should go ahead. There are 5 types of feasibility which are technical, economic, legal, operational and schedule.

1) Technical Feasibility

Technical feasibility is focus on technical resources. It considers the technical requirements which then will compared to the organization technical capability. The required resources are involved software, hardware and others.

2) Economic Feasibility

Economic feasibility is referring to the cost-benefits analysis of the proposed project. The organization should count the cost of the proposed project. Then, if the benefit of this proposed project is equal or exceed the cost, the economic feasibility of this proposed project assume to be succeed.

3) Legal Feasibility

Legal feasibility is to investigate whether the proposed project have any conflicts with the legal requirement such as data protection acts or social media laws.

4) Operational Feasibility

The uses of operational feasibility is to analyze and understand how well the proposed system solve the problems. Operational feasibility also can determine whether the organization satisfies with the alternative solutions.

5) Schedule Feasibility

This feasibility helps to the organization estimates how the proposed project can be complete in given time. The given time can be decided by the organization and customers. At the same time, it can also determine the speed of development process.

PROBLEM STATEMENT

Generally, a property manager will contact the customers when they want to find a house. So, they will show the available house to the customers physically. Then, due to the Covid-19 pandemic that occurs nowadays, MCO was announced by the government. Hence, the property managers were in dilemma whether they could operate their business without physical interaction.

Therefore, we ought to construct an application for Nest Finder property management to help extend their business operating boundaries by establishing an online business application.

INTRODUCTION

Nest Finder is an application that can help customers find the most suitable house for themselves easier. This application also give suggestion to the customers who cannot decide for the house. The suggestion given is based on number of people per house, budget, and their lifestyles.

On the organizer side, the Nest Finder application can update information in the real time to the customers about the latest information that can be seen at the company information page. The information stated include the latest available property, company sales and more.

Other than that, organizer also can manage the existing and new properties. They can add the new properties in the list of Nest Finder properties and edit or delete the existing properties.

Besides that, organizer can manage the customers list too which they can add the new customers, edit the active customers information and delete customers information after they are no-longer of Nest Finder users.

PROGRAM DEVELOPING LIFE CIRCLE (PDLC)

Problem Understanding

Property management is the daily oversight of residential, commercial, or industrial real estate by a third-party contractor. Takes responsibility for day-to-day repairs and ongoing maintenance, security, and upkeep of properties. They usually work for the owners of investment properties such as apartment and condominium complexes, private home communities, shopping centres, and industrial parks.

Due to the Covid-19 epidemic and MCO was announced by the government, property managers were in a dilemma as to whether they could operate their business without physical interaction. Therefore, we are like to construct an application for Nest Finder property management to help extend their business operating boundaries by establishing an online business application.

Problem Analysis

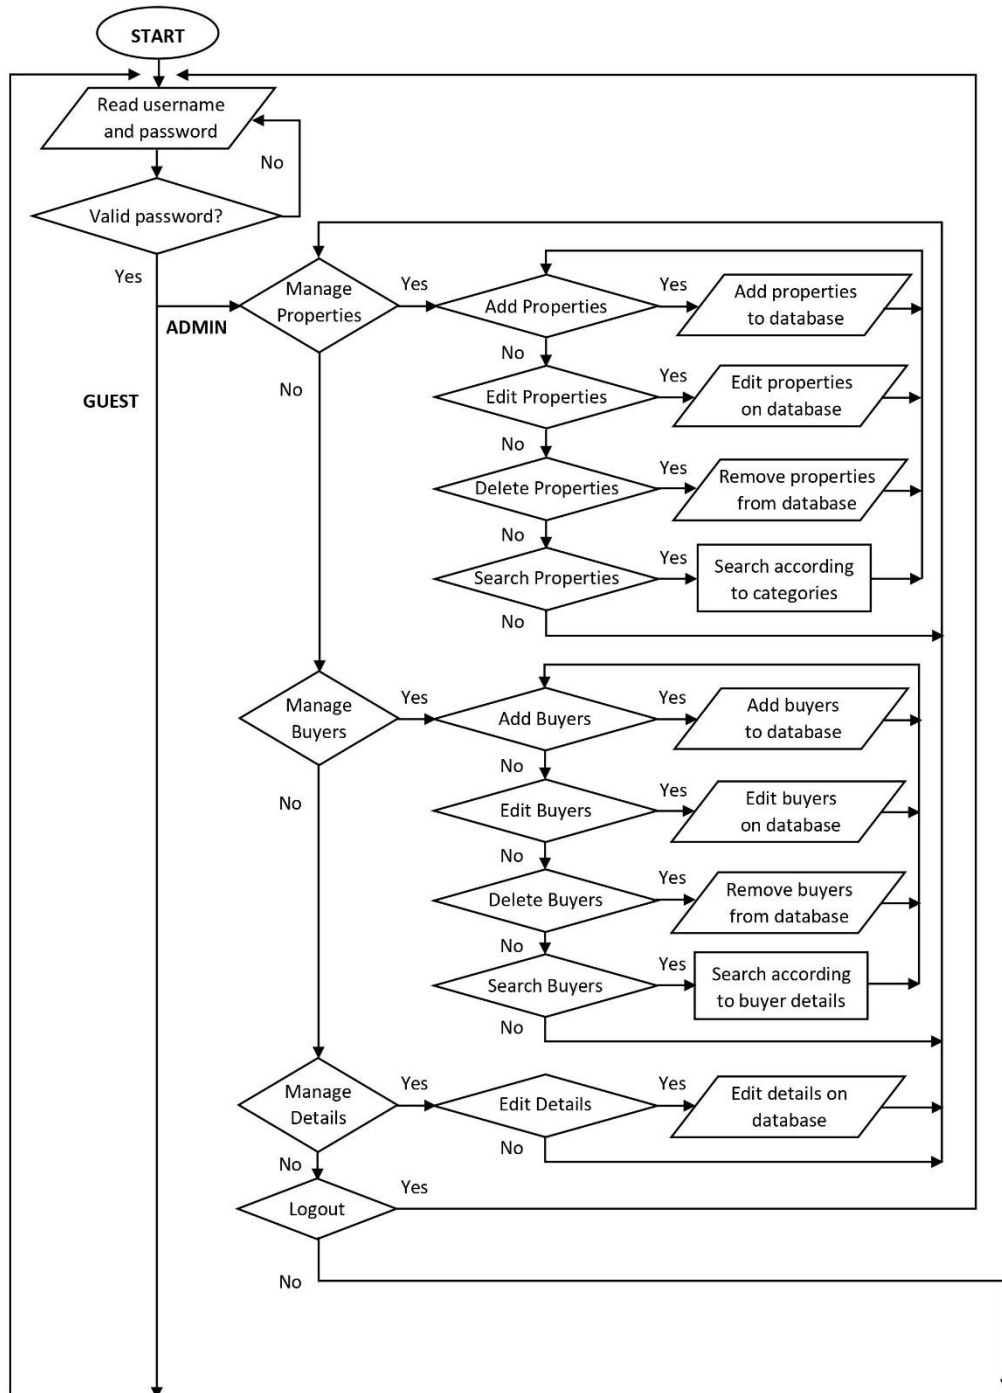

Our system must have features about storing data, edit data, display data and filter data about properties, buyers and company information. In addition, our system also needs to have a suggestion mechanism, which can suggest the best properties to the tenant. We need to create a database to save the information.

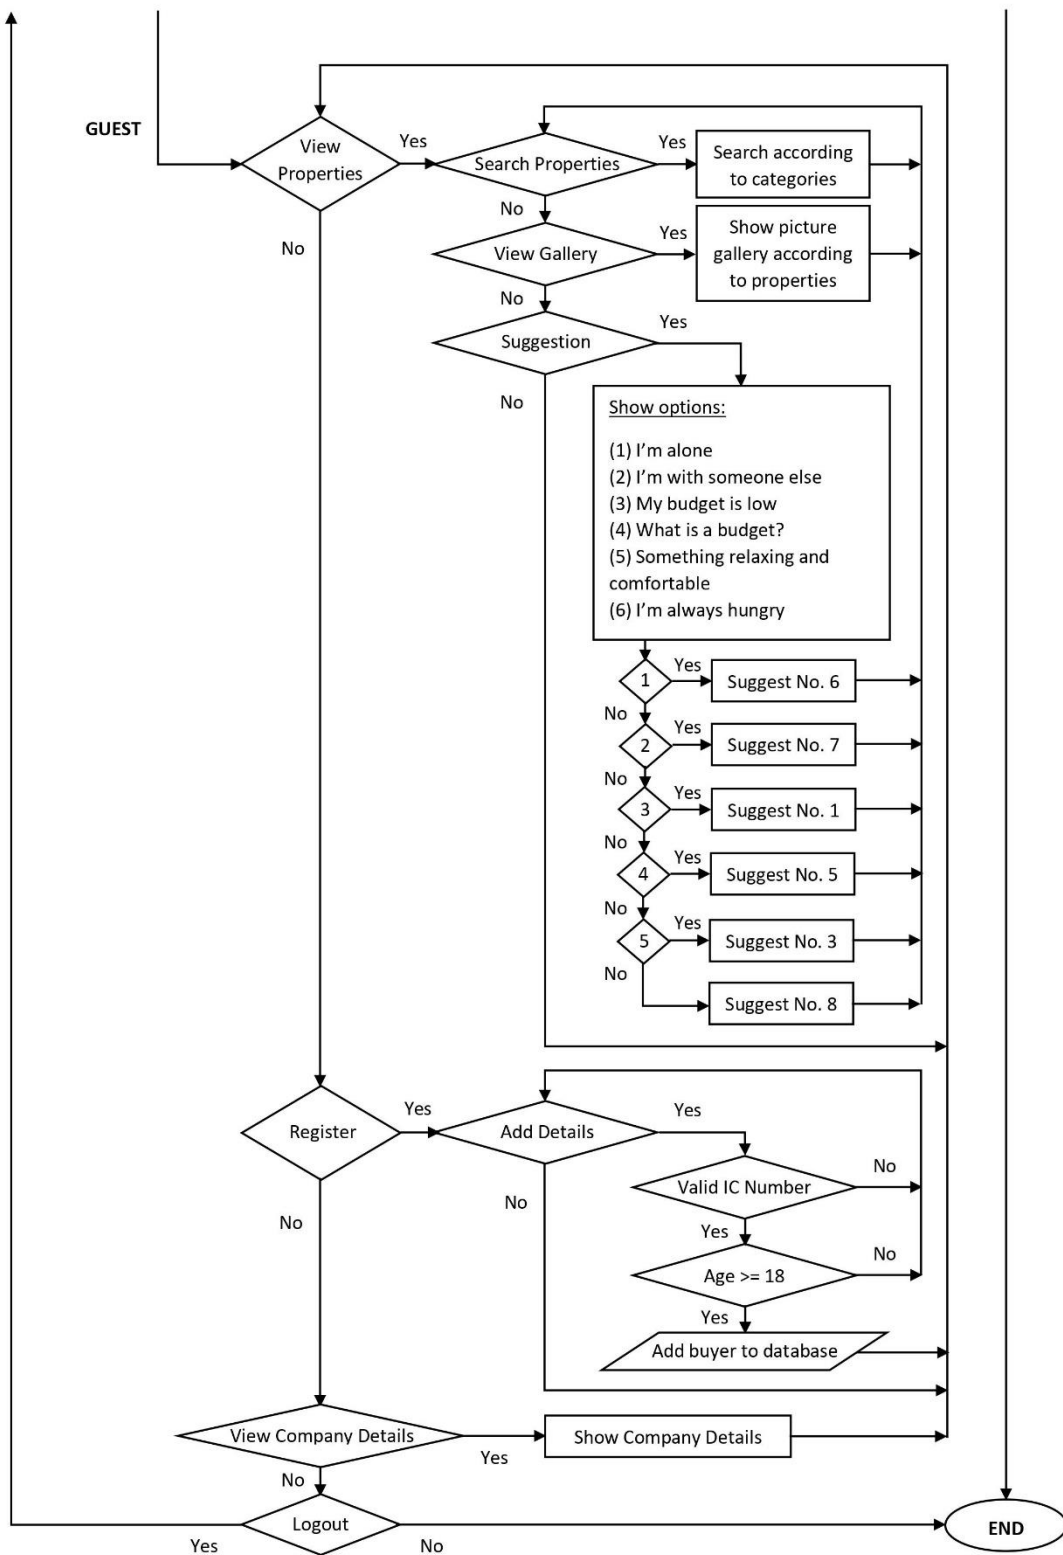

First, we need to input username and password. If the user key in username and password for admin, they will login to manager main page. After that, user can choose to manage properties, tenants or company's information. This basic information such as ID number, house type, rent, number of rooms and toilets, location, contact number and simple description about properties. We can add, edit, delete and edit the information from database.

Then, if user key in username and password for guess, they will log in to guess main page. They can choose to view properties, register or view our company details. When they choose to view properties, they can get some suggestion base on house type, rent, rooms, toilets and location they choose. After that, user can register their information to system, their information will be saved in our database.

Algorithm Design

Application Flowchart

Implementation

We used visual basic windows form app to develop our system application. In this system application, we used programming language C# to develop and run our program.

Testing

After we done write our program code and design our interface, we try to run our program. We will make sure our program can be run perfectly without any bugs. If there are some problems or bugs discovered, we will look back to our code and discover the problem part. This process will be repeat and continue until no bugs and problem are discovered.

Maintenances

After we done testing our system application, we must always update the program base on user's suggestion. Such as add one more information for properties' pictures.

SIGNIFICANCE OF THE APPLICATION AND FUTURE WORK

A New Booking Trend

The entire world is now connected to the internet. Clients nowadays use the Internet to learn whatever they need to know. You're probably missing out on a lot of opportunities if you don't have an internet presence

Hassle-Free Management of Bookings

Clients will save time with a booking system because they will not have to wait hours for the admin to confirm their booking details. At the same time, there's no need to hire a workforce to handle the clients and won't be tied to a phone waiting for guest calls.

The application system is available for 24 hours

The process is automated with the use of a booking system. The platform automatically reduces the number of houses available in the system after a booking is made. The online reservation system is available at all times. This allows potential clients the freedom to hire a property whenever they wish. It also allows you to increase your sales because you are not restricted by working hours.

You can maximize booking

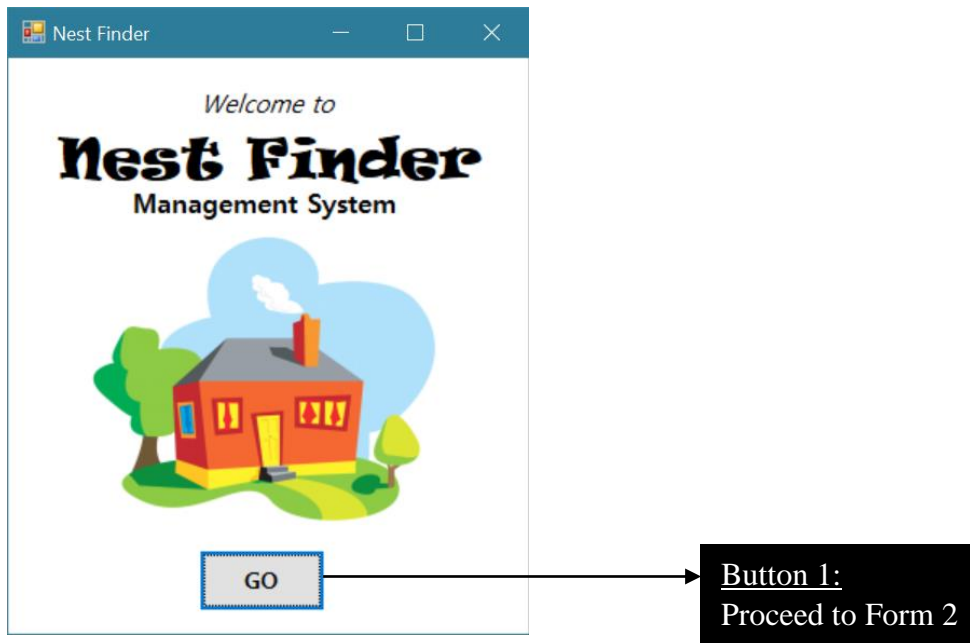

Clients who plan their own reservations are more likely to show up, limiting the chance of no-shows. If a customer needs to cancel, the property automatically becomes available online for another client to book. You won't leave any unused activity slots or rentals on the table if you maximise your bookings.

Reduce the amount of work you do

Online reservation systems lighten your staff's burden and improve customer service. With each booking, these platforms can ensure that bookings are linked and availability is updated. The work process is made easier with a competent booking system.

GUI OF FORM AND CODES USED IN THE APPLICATION

Form 1 – Splash Screen (Welcome Page)

Application code for **Button 1**:

```
Private Sub Button1_Click(sender As Object, e As EventArgs) Handles Button1.Click
    Login.Show()
    Me.Hide()
End Sub
```

Form 2 – Login Form

The screenshot shows a Windows application window titled "Login". Inside the window, there is a link "<-- Back to splash screen" at the top. Below it is the instruction "Please select username and enter the correct password." The form contains a "Username:" label followed by a dropdown menu, and a "Password:" label followed by a text box and a small eye icon. At the bottom of the form are two buttons: "Login" (blue) and "EXIT" (red). To the right of the form, three black boxes with white text provide descriptions for these buttons, with arrows pointing from the buttons to the boxes:

- Button 3:** Show/Hide password (points to the eye icon)
- Button 1:** Proceed to Form 3 or Form 7, depending on user input (points to the Login button)
- Button 2:** Close the application (points to the EXIT button)

Application code for **Button 1**:

```
Private Sub Button1_Click(sender As Object, e As EventArgs) Handles Button1.Click
    Dim password As String

    password = TextBox1.Text

    If password = "1111" And ComboBox1.Text = "Admin" Then
        Me.Close()
        Main.Show()
        MessageBox.Show("Login success!" & vbNewLine & "Welcome back.",
            "WELCOME", MessageBoxButtons.OK, MessageBoxIcon.Information)
    ElseIf password = "guest" And ComboBox1.Text = "Guest" Then
        Me.Close()
        GuestMain.Show()
        MessageBox.Show("Login success!" & vbNewLine & "Welcome to Nest
Finder.", "WELCOME", MessageBoxButtons.OK, MessageBoxIcon.Information)
    Else
        MessageBox.Show("Login failed!" & vbNewLine & "Please enter the
correct password.", "ERROR", MessageBoxButtons.OK, MessageBoxIcon.Warning)
    End If
End Sub
```

Application code for **Button 2**:

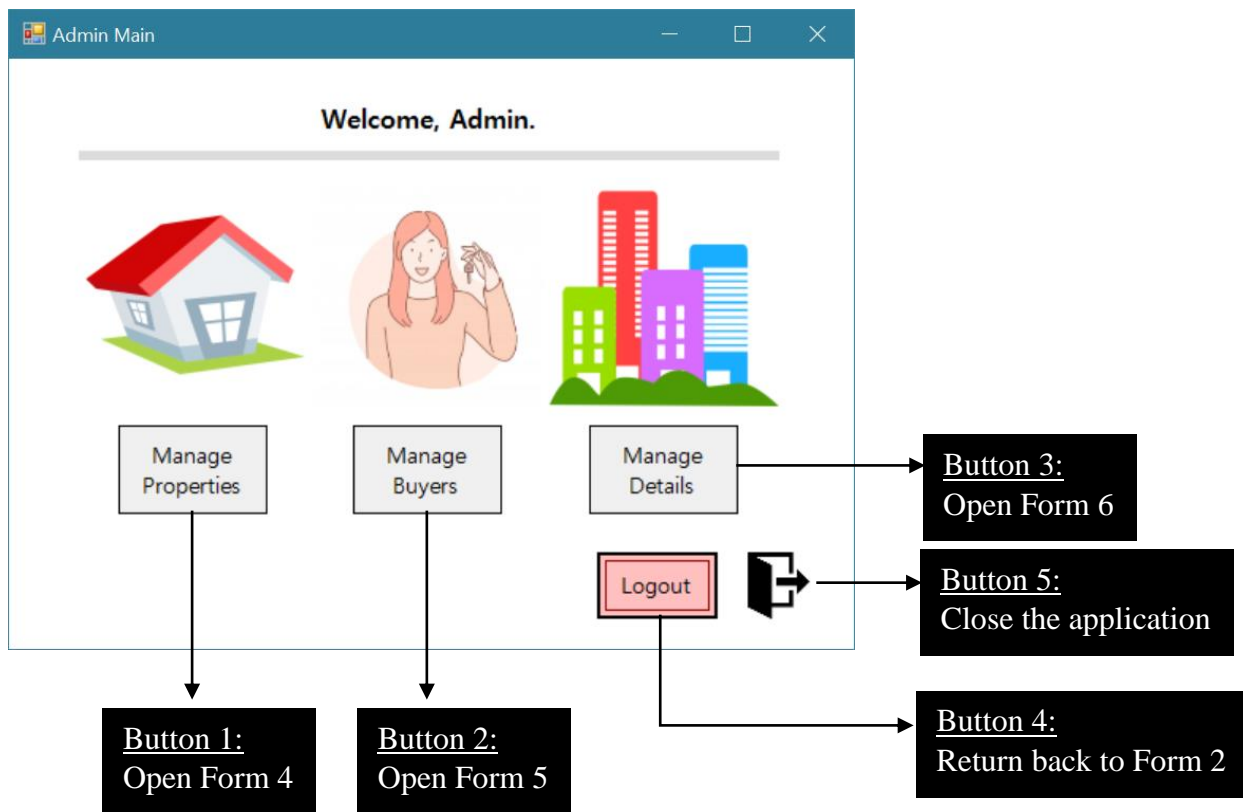

```
Private Sub Button2_Click(sender As Object, e As EventArgs) Handles Button2.Click
    Dim user_respond As Integer
```

```
        user_respond = MessageBox.Show("Are you sure to exit the application?",  
"EXIT?", MessageBoxButtons.YesNo, MessageBoxIcon.Warning)  
  
        If user_respond = vbYes Then  
            MessageBox.Show("Thank you. Do visit us again :)", "GOODBYE",  
MessageBoxButtons.OK)  
            Application.Exit()  
        End If  
    End Sub
```

Application code for **Button 3**:

```
Private Sub Button3_Click(sender As Object, e As EventArgs) Handles Button3.Click  
    If TextBox1.UseSystemPasswordChar = True Then  
        TextBox1.UseSystemPasswordChar = False  
    Else  
        TextBox1.UseSystemPasswordChar = True  
    End If  
End Sub
```

Form 3 – Admin's Main Page

Form 4 – Manage Properties Form

	ID	House Type	Price	Rooms	Toilets	Location

Form 10 – Buyer Registration Form

The screenshot shows a Windows application window titled "Register". Inside the window, there is a form with the following fields and controls:

- Full Name:** A text input field.
- IC Number:** A text input field.
- Gender:** A dropdown menu.
- Age:** A dropdown menu.
- Contact Number:** A text input field.
- Current Location:** A text input field.
- Preferred House Type:** A text input field.
- Budget:** A text input field.
- Check IC:** A button.
- SAVE:** A blue button.
- Cancel:** A red button.

Annotations for the buttons:

- Button 1:**
 - Ensure all details are filled in
 - Save buyer details into database
- Button 2:**
 - Cancel registration
- Button 3:**
 - Check if IC Number input is valid
 - Insert gender based on IC Number
 - Insert age based on IC Number, and notify user's disqualification for registration if user is underage
 - Insert current location (state of Malaysia) based on IC Number

Application code for **Form 10**:

```
Public Class RegisterBuyer

Form 11 – View Company Details Form

The screenshot displays a web browser window with the title "About Nest Finder". The main content area features the "Nest Finder Management System" logo, which includes a stylized illustration of a red house with a yellow door and windows, set against a blue sky with a white cloud and green trees. To the right of the logo, there is a "Description:" section with the text: "We seek to help tenants for finding their perfect home!". Below this, a table lists key statistics:

Date of Establishment:	1.6.2021
Total Sales:	RM100,111
Total Houses Owned:	9
Houses Rented:	2
Houses Available:	7

In the bottom right corner, there is a small icon of a house with a chimney.
